

FORTIVO

TECHNICAL SPECIFICATION

Type:	safety shoes
Protection:	composite toe cap, penetration-resistant insert
Additional protection:	metatarsal protection
Standard:	EN ISO 20345:2022 S1PL M FO SR
Sizes:	36-49

PROPERTIES

Safety footwear made of natural suede leather, ensuring continuous air circulation and comfort during long shifts. Equipped with a 200 J composite toe cap, non-metallic puncture-resistant insert and additional metatarsal protection, it effectively protects the foot against injuries. The anti-vibration lining and perforated, contoured insole create an "air cushion", improving ventilation and maintaining hygiene inside the footwear. A structural element in the sole provides energy absorption in the heel and shock cushioning. Resistance to oils, acids, alkalis and brief contact with hot surfaces (180°C/min) ensures durability. The reinforced toe area increases the leather's abrasion resistance, extending the service life of the footwear.

Sizes: 36-49

Toe cap: composite

Insert: Kevlar puncture-resistant

Footwear height: 13 cm

Shoe weight: 1.00 kg / 1 shoe

Sole attachment: injection moulded
